

gmx | Raspberry PI HAT

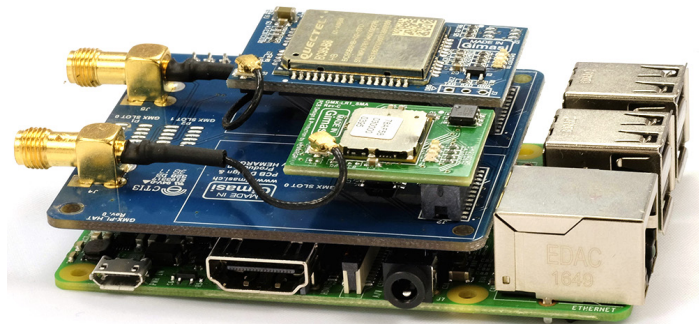

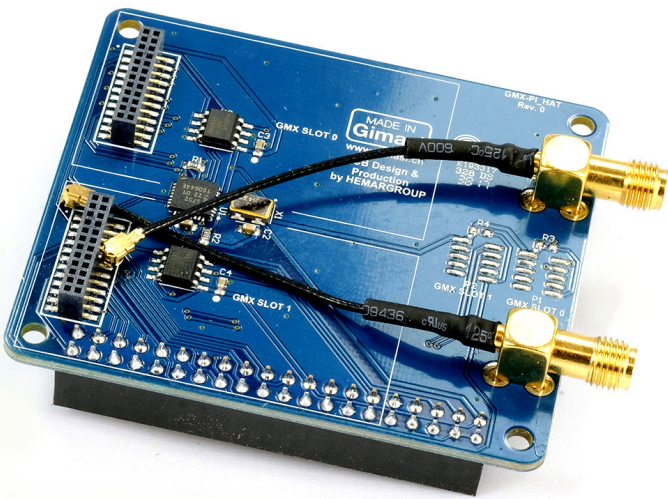

GMX Raspberry PI HAT

The **GMX PI HAT** brings the GMX module interface to the Raspberry PI world, opening this platform to the GMX IoT modules world. The HAT add two GMX modules slots through a dual IC2 UART interface based on the NXPSC16752 chip.

The HAT works with the 40 Pins PI extension bus and is thus compatible from the PI 2 onwards. Full installation guidelines and Python code examples to user our GMX Lora and NBloT modules are available on our Github pages https://github.com/gimasi/GMX_PI_HAT

Technical Specs

UART IC	NXPSC16752
Operating Voltage	3.3 V
Number of GMX Slots	2
Length	68 mm
Width	53 mm
