

GMX-WIFI

WiFi Module based on the ATMEL ATWINC1500 module - compatible with original Arduino WiFi shield. Designed to give WiFi connectivity to the Tuino 1 board and all boards that support the GMX bus.

Comes with a uFL connector for external connector. Technical description and working examples for the Tuino platform are available on our the GitHub pages.

Technical Specs

Radio Module	ATWINC1500
Antenna Connector	uFl or Chip Antenna
Operating Voltage	3.3V
Length	32mm
Width	27mm
